SUMMARY

Full Stack Software Engineer with 4+ years of experience turning complex business requirements into reliable, production-ready software across web and mobile platforms. Comfortable owning the entire development lifecycle — from system architecture and API design to payment gateway integrations and containerized CI/CD deployments. Work spans multiple industries and includes systems serving thousands of active users daily, built with a strong emphasis on clean, scalable, and maintainable code.

EXPERIENCE

Full Stack Software Engineer

Aug 2025 – Present

PT Union Routelink Communication

Yogyakarta · Full-time

- Developed and maintained an ISP billing system, customer portal, and marketing site serving 5,000+ customers — covering new feature development, bug fixes, and performance optimization.
- Designed a multi-payment gateway module (Midtrans, Winpay, SMBC) supporting payment links, virtual accounts, and QRIS, giving customers flexible payment options while simplifying billing reconciliation.
- Built auto suspend/unsuspend integration directly with the MikroTik API, cutting provisioning time by 90% and eliminating manual intervention by the support team.
- Implemented automated WhatsApp and email notifications for invoice reminders, payment confirmations, and service updates, reducing late payments by 40%.
- Built and maintained a CI/CD pipeline with GitHub Actions, automating testing and production deployments, reducing deployment errors by 50% and shortening release cycles.
- Designed an internal RESTful API as the communication layer across services, and contributed within a team of 5 engineers through code reviews and coding standards.

Full Stack Software Engineer

Jul – Aug 2024

PT Pan Brothers Tbk

Boyolali · Full-time · Onsite

- Contributed to the maintenance and development of MES (Manufacturing Execution System) features to support production operations within a short-term engagement.

Full Stack Software Engineer

Nov 2023 – Mar 2024

Computer Center — Universitas Teknologi Yogyakarta

Yogyakarta · Full-time · Onsite

- Designed and built a university digital platform from scratch, replacing paper-based administrative forms with a streamlined digital workflow for 2,000+ students — significantly reducing processing time and improving data accuracy.

Freelance Software Engineer

2021 – Present

Zenvoye.com

Remote

- Delivered projects for clients across various industries — e-commerce, education, and services — ranging from marketplace platforms and landing pages to company profiles and CMS solutions.
- Managed projects end-to-end, from requirements gathering and planning through development and handover, building strong communication and project management skills.

RECENT PROJECTS

routelink.net.id — ISP Company Website & Customer Portal

May – Jun 2026

Laravel 13, Livewire 4, Flux UI, Tailwind CSS · Built independently

- Official company website that goes well beyond a landing page: service information pages, an interactive coverage-area checker with live network map integration, a new customer registration flow, a careers portal with online job applications, plus news and contact pages.

Next.js 16, PayloadCMS v3, PostgreSQL, Tailwind CSS · Built independently

- Public-facing ISP website and headless CMS in a single codebase, featuring an internet package catalog, news, and help center, an end-to-end customer registration flow, and a partner/affiliate portal.
- Implemented dynamic media storage routing between Vercel Blob, Cloudflare R2, and local disk based on the deployment environment.

matrixcore.id — ISP Operations & Billing System

Aug 2025 – May 2026

Laravel 12, PHP 8.2, MySQL, MikroTik API · Contribution: billing & sync

- Full-scale ISP operations platform unifying billing, customer management, network assets, and ticketing. Contributed end-to-end billing with prorate calculation and invoice scheduling, a multi-payment gateway (Winpay SNAP, Midtrans) with virtual account and QRIS, a financial reconciliation module, a voucher system, and automated WhatsApp notifications.
- Designed and built a real-time API integration that syncs customer data into the Matrix platform — covering 5,000+ customers, hundreds of network clusters, and tens of thousands of site IDs — with automated entity matching and a 98% success rate.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Go, PHP, React / Next.js, Laravel, Livewire, Tailwind CSS, Three.js

Backend & API: RESTful API Design, Authentication & RBAC, Queues & Background Jobs, Automated Testing, Headless CMS

Mobile: React Native, Expo, Kotlin (Android)

Databases & Caching: MySQL, PostgreSQL, Redis

DevOps & Infrastructure: Docker, GitHub Actions, CI/CD Pipelines, Git, GNU/Linux, VPS Deployment, Object Storage

Integrations: Payment Gateways (Midtrans, Winpay), Shipping API, Marketplace Sync (Shopee/TikTok), WhatsApp API, Geocoding & Mapping, OCR, Network API (MikroTik)

EDUCATION

Universitas Teknologi Yogyakarta

Graduated 2023

Bachelor of Informatics (S1)

Yogyakarta

- Focused on software engineering, web programming, and database systems.
- Final project: Lakubo — an e-marketplace platform for SMEs in Boyolali, built with Laravel, MySQL, and Tailwind CSS, with an Android version in Kotlin.

CERTIFICATIONS & LANGUAGES

- **Full-stack Engineer Career Path** — Codecademy, 2023 (ID: 4F5FCA)
- **Microsoft Office Specialist (MOS) – Word 2019 Associate** — Education and Training Center, 2022 (ID: wE5-4E)
- **Languages:** Indonesian (Native), English (Conversational)
